Classic Triangular sign system

Product Details

Signface constructed from reinforced PVC with a reflective coating protected by a clear PVC top layer. Sign symbol printed on the inside of the clear PVC top layer and therefore also protected.

All metalwork is heavy duty bright zinc plated to prevent corrosion.

Shackle at top of tripod locks front legs open and keeps the signface taut.

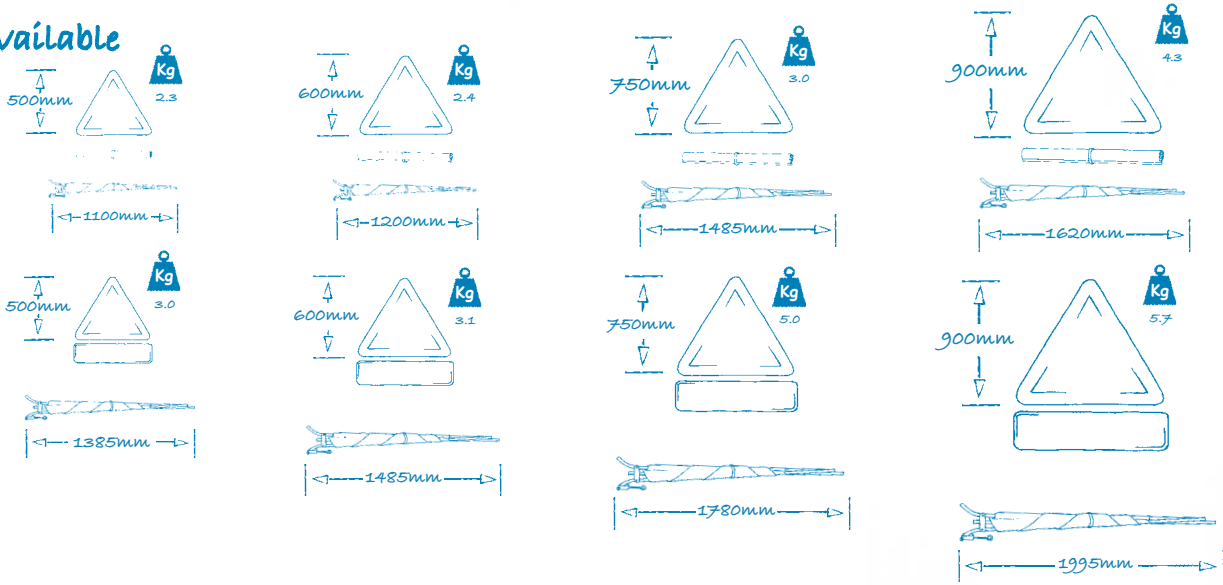

Weight hook on back leg of tripod for hanging ballast if conditions are volatile and additional stability is required (see PVC Sandbag and Quazarweight below).

Press stud strap holds signface neatly rolled-up when in storage or transportation. Includes product information such as sign diagram, size and class of reflectivity (standard UK spec product only).

Standard ground clearance of 300mm, as specified by UK Road Sign legislation.

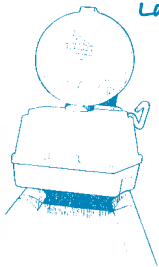

Grey PVC backcloth is extended and 6 rust-proof press-studs positioned to enable easy fixing of interchangeable supplementary texts or 'variants'.

Sizes available

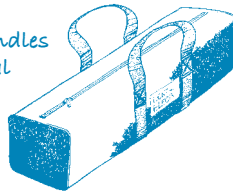

Optional extras

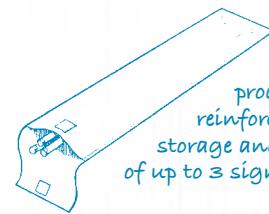

Lamp brackets.

Kit bags produced from tough, durable PU Nylon with webbing handles and full length zip. Ideal for storage and transportation of up to 8 signs.

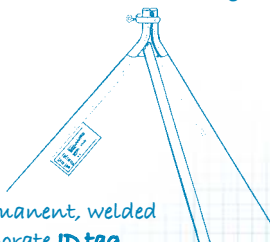

Container bag produced from reinforced PVC for storage and transportation of up to 3 signs.

Heavy duty PVC sandbag features a watertight cap, flo. orange for added visibility.

Permanent, welded corporate ID tag.
