

APPLYING LABELS TO JSP PRODUCTS

Many customers would like to put their own identification on their helmets by way of self-adhesive labels or marker pen, however the instruction that is supplied with every helmet states.

Do not apply paint, solvents, adhesives or self-adhesive labels, except in accordance with the instructions from the helmet manufacturer.

Suitability of a self-adhesive label can only be determined by carrying out tests over the expected life of a helmet and could therefore take several years. We therefore cannot guarantee the performance of our products when material other than that used and tested by JSP Ltd is used to modify a helmet's appearance.

Material similar in composition to that used by JSP and detailed below will probably not result in an adverse reaction, however, the only way to establish the suitability of an application of a self-adhesive label is to apply the label for a period of time and then carry out a full British Standard performance test.

Details of the material used on labels applied by JSP is given below.

Premier Labels -

Manufacturer - Ritrama (UK) Ltd
Product Code - 11864
Adhesive Type - Permanent Acrylic Tack
Minimum Application Temperature - 0°C
Service Temperature - -30°C to +120°C
Recommended Life 2 Years

Moschatel -

Manufacturer - Avery Denison
Product Reference - Fascal 700 Standard
Adhesive Type - Permanent Acrylic Tack - Medium
Minimum Application Temperature - +10°C
