

## TRAFFIC MIRRORS

### WIDE ANGLE TRAFFIC MIRROR

A wide angle traffic mirror is particularly effective at slow moving traffic junctions, reducing the number of mirrors to be installed. Fitted with a rim to protect against glare and rain.

#### P.A.S® OPTICS

Unbreakable, high quality, clear and sharp image, with no distortion along with an anti-static, plus anti-scratch coating. Anti-UV treated frames and optics to ensure longevity and protection against the elements.

#### 3 DIRECTIONS

180° wide field of vision, a perfect balance between convexity distortion and usability. Viewing distance and size is important when choosing a mirror.
