Acid Neutralizer - 4KG Bottle

4kg bottle of Chemical neutraliser. Vytac ACX is a chemical neutralisation powder designed to render chemicals inert and environmentally harmless. When the powder is mixed with the spilled acid it will react, generating a harmless gas.

Vytac ACX has an inbuilt colour indicator system that will turn a bright pink colour to indicate when the acid has been completely neutralised.

Once the chemical has been neutralised then the powder can be disposed off as general waste.

N.B – Water should be used to dilute before attempting to neutralise some concentrated acids e.g., hydrofluorosilic, phosphoric and sulphuric acids
