

noise trapper

Reduces noise by up to 50%

The cost-effective noise reduction barrier designed and manufactured by Fentex in the UK

The Noise Trapper is a cost-effective solution for any on-site noise problem. Used in construction sites or any other noise problem areas, the barrier traps noise diminishing any loud sounds that may occur from the source.

Due to its light 5KG weight it can be easily attached and suspended to and from temporary or permanent fencing and is easy to transport or store. The barrier is safe to handle with no fibreglass or rockwool used.

Noise Trapper features sustainable material and is environmentally friendly using the unique Fentex EVO Recycled® core.

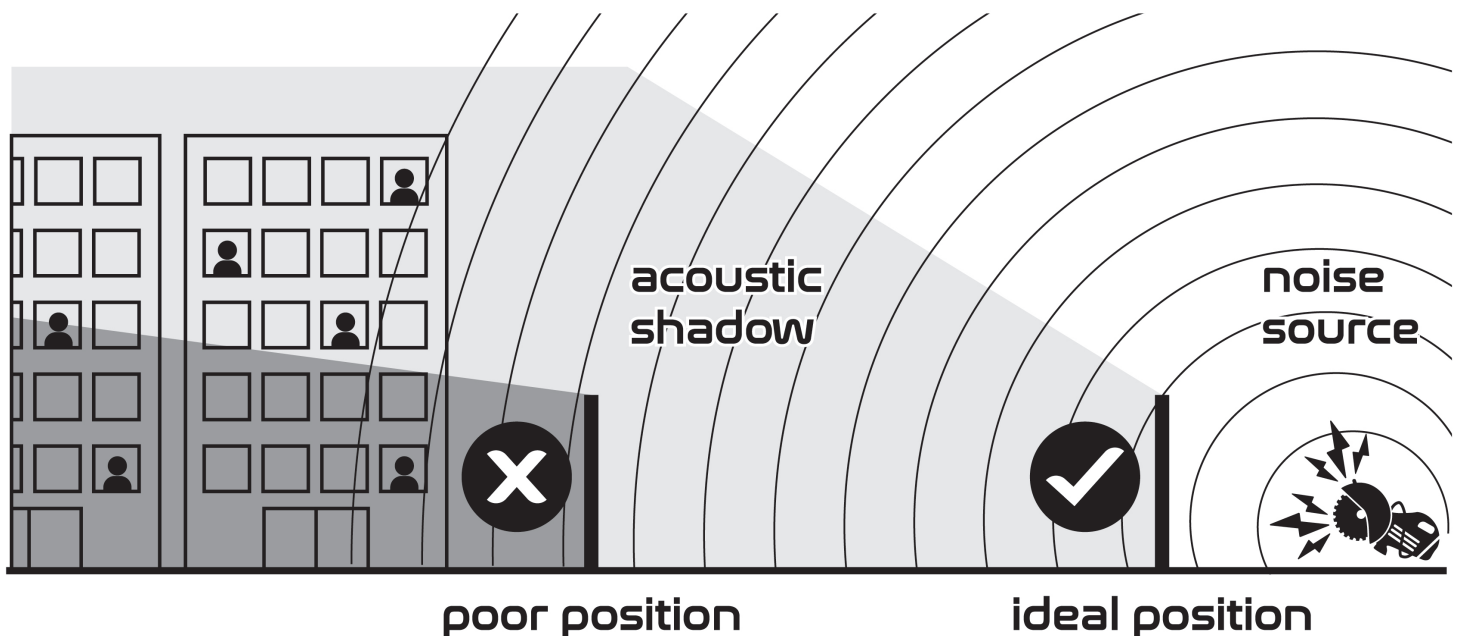

The barriers have a superior acoustic performance, being able to absorb up to half of the noise created by a disc saw cutting concrete.

The barriers can also be linked to one another seamlessly to create a larger acoustic barrier, whilst being fire, crack, water, and weather resistant.

CO₂** 

How Noise Trapper Works

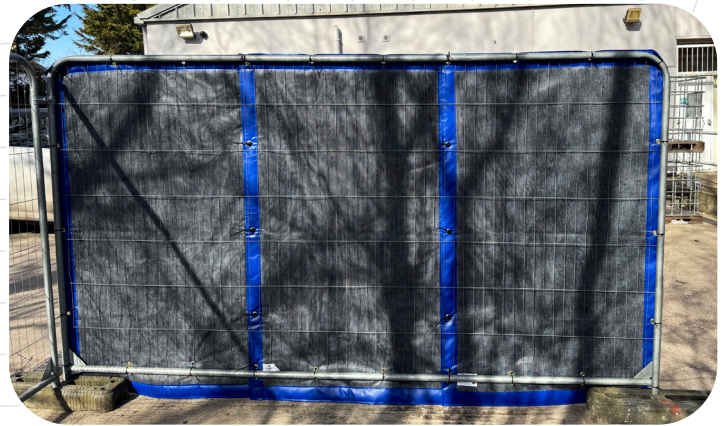

noise trapper

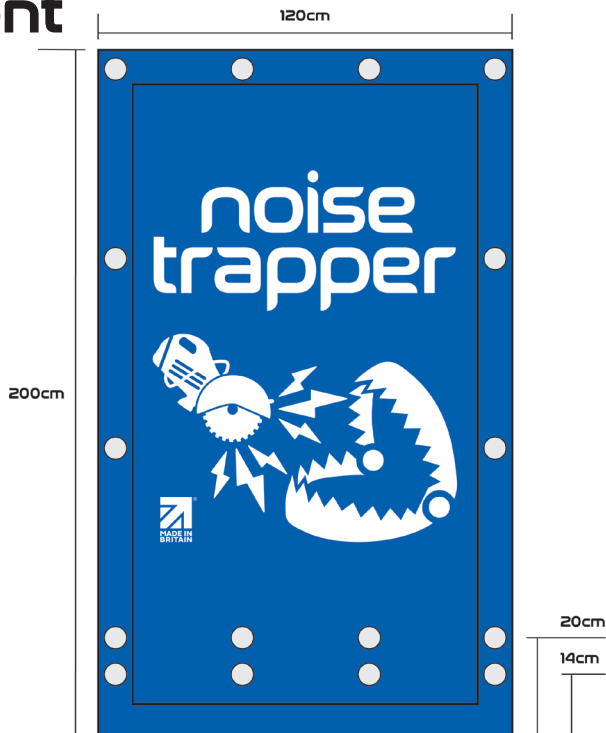

Benefits of Noise Trapper

- Lightweight and easy to install
- Reduces noise by up to 50%*
- Noise reduction BS EN ISO 10140-2 Certified
- Water resistant
- Flame resistant
- High tensile strength
- UV resistant

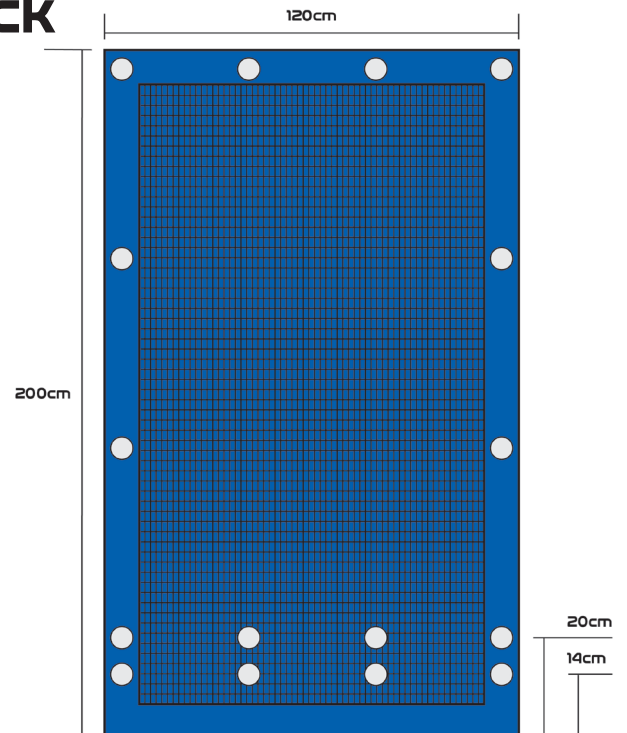

*Tested with industrial disc saw cutting concrete.
