TRAP-TM

Description:
Pack of One SpillTrapper Track Mat

Absorbency / Capacity:
150 Litres

Dimensions:
146 x 500cm

Application:
Oil & Fuel

Quantity:
1

Ean:
0640516613600

Pack of One SpillTrapper® Track Mat

SpillTrapper® The oil mat with the recycled core.

SpillTrapper® is the ultimate eco-friendly absorbent mat for plant, construction, rail, workshops, and more! The only under plant & machinery spill mat to meet and exceed BS4790 Fire Retardant Standards.

Now with a new, increased absorbent capacity across the entire range, SpillTrapper® captures even larger volumes of oils, fuels, and other hydrocarbons - no additional containment tray is needed.

Superior absorbency: Enhanced with Fentex's EVO Recycled® burst fibre technology for maximum spill capture, keeping work areas cleaner.

Hydrophobic inner layer repels rainwater, ensuring high absorbency remains focused on oil & fuel leaks and spills.

Environmentally conscious design: Protects the ground from leaks, helping to prevent environmental damage and ground contamination.

Tough construction: Durable non-slip vinyl base and heavy-duty mesh grid withstands intensive use.

Metal eyelets allow secure pegging or hanging from machinery when required. Fentex engineered for exceptional performance and maximum value.

Manufactured in Britain.

Eleven sizes of absorbent oil mat available.

SpillTrapper® is the greener option for oil mats and is more cost-effective than other pad or nappy-style products, offering greater value, sustainability and absorbency.

E & OE. 10-1-25. SpillTrapper® will not counteract flammable properties of any liquid absorbed into the mat. If a spill or leak occurs, act according to your existing fire safety procedures.
